

## Instagram Automation Bot — Setup Instructions

### 1. What You Need:

- Google Chrome version\_main=135

### 2. Edit the `accounts.csv` file and add your account like this:

username,password,target\_profile,max\_to\_follow,sexy\_link,language

EXAMPLE:

bebesitacosacimetto,Bebesita2!\_lafederica.nazionale,5,https://www.instagram.com/reel/DI  
MUVkdMQsb/?igsh=dDYzeTEybzRpdDBl,italian

### 3. Logging in via Cookies (Optional but Recommended)

To avoid login issues, you can export cookies from your Instagram session using a Chrome extension:

1. Install the Chrome extension: EditThisCookie:

<https://chrome.google.com/webstore/detail/editthiscookie/fngmhnnpilhplaeedifhccceomclgfbg>

2. Log in to instagram.com in Chrome (with the correct account).

3. Click the EditThisCookie icon in your browser toolbar.

4. Click the "Export" icon and copy the full cookie string.

5. Paste the cookie string into a file:

Save it as: `cookies/UsernameOfTheBot.json` (you can also paste in a text file and rename the extension to `.json`)

6. Run the bot. It will load your Instagram session automatically.

3. 📁 Running the Bot:

- Double-click `bot.exe`
- It will automatically:
  - 1) Log in (or load cookies)
  - 2) Unfollow old users
  - 3) Follow new ones
  - 4) Send DMs (only to public profiles)
  - 5) Send likes (only to public profiles)

4. 🍰 Optional:

- Add or edit DM templates inside `dm\_messages.json` (make sure to include `{link}` do not add the link through the messages but do it through the accounts.csv

5. 📁 Notes:

- Don't close Chrome while the bot is running.
